DECLARATION OF UNTREATED SEED STATUS

To Whom It May Concern,

Green Harvest is a business committed to safeguarding both personal health and health of the planet. That is why we are an organically certified seed wholesaler #4001W, with Australian Certified Organic, which allows us to pack and process seed and still maintain its organic certification and integrity. Our range consists of organically certified seeds with ACO (BFA) and NASAA as well as non-organic seeds. Exceptions to this are seeds supplied by OGA organic growers; these seeds are not covered by our ACO certification and so are listed under the OGA accreditation. Many of the non-organic seeds are grown for us by a network of small growers, using natural methods.

Any seed supplied by Green Harvest that does not have the ACO logo on the packaging is supplied, to the best of our knowledge, as untreated seed.

Also to the best of our knowledge, no seed stocked by Green Harvest is genetically modified.

Green Harvest does not now and will never use any chemical treatments on our seeds; our organic solution to possible weevil problems is BFA approved diatomaceous earth, the grey, powdery coating on some of our seeds.

Our preference is always to supply organic seed. If we offer a seed as untreated it is because in that particular seed harvest year there was no organic seed available to us.

This statement covers all seed supplied by Green Harvest to:

Yours sincerely,

Proprietor
